C2BMC - Product View

OTHER SERVICES

DCTS, IWS, AMHS/DMS, SIPRNET OUTLOOK, MICROSOFT OFFICE, Web, Interfaces etc..
These fall in the category of Host Center provided Services not fielded as part of the Suite or Laptop configurations

ADSI – Air Defense Systems Integrator
AMHS – Automated Message Handling System
C2 – Command and Control
C2BMC – Command Control Battle Management and Communications
CNIP – C2BMC Network Interface Processor

COCOM – Combatant Command
DCTS – Distributed Collaborative Tool Suite
DMS – Defense Message System
DMETS – Distributed Multi-Echelon Training System
GEM – Global Engagement Manager
IWS – Info Work Space

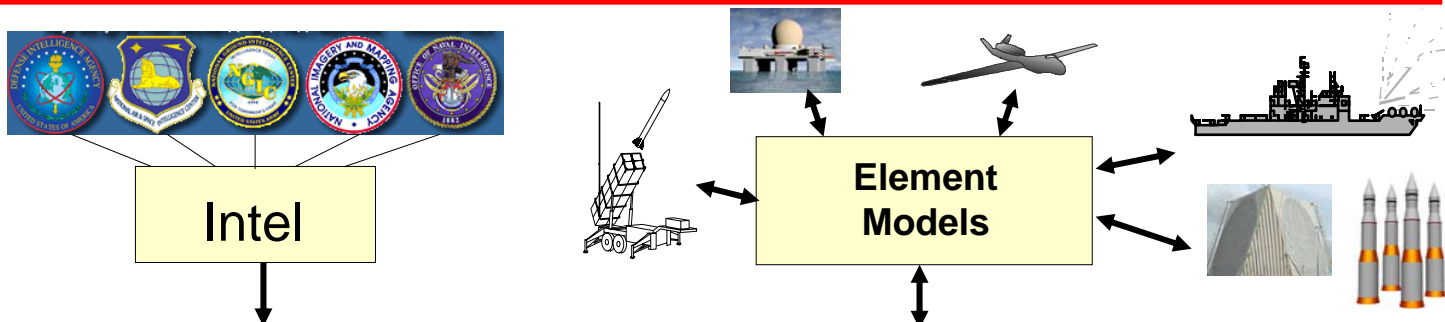

C2BMC (BMDs) Planner Supports the Three Phases of Planning

- **Adaptive/Deliberate Planning** (6-24 months before a battle)
 - Study effective deployment and coordination schemes
 - Assess acquisition strategies
- **Crisis Action Planning** (hours or days before an attack, based on updated information)
 - Assess likely threat scenarios and support element placement to maximize protection of critical assets
 - Support development of element coordination strategies to deconflict elements across threats and missions
- **Dynamic Planning** (near real time adaptation for changing situations) in close coordination with GEM (execution planning)

Acronyms

AADC – Area Air Defense Commander
AAMDC – Area Air and Missile Defense Commander
AO/IO – Attack Operations/Integrated Operations
C2BMC – Command Control Battle Management and Communications
COCOM – Combatant Command
I3 – Integrated Intelligence and Imagery
ISR – Intelligence, Surveillance & Reconnaissance
ITO – Integrated Tasking Order

JFC – Joint Force Commander
JFACC – Joint Force Air Component Commander
JPTL – Joint Prioritized Target List
JWARN – Joint Warning and Reporting Network
PROCAP – Protected Capability
ROE – Rules of Engagement
TACOPDAT – Tactical Operations Data
TNL – Target Nomination List

C2BMC BMDS Planning Architecture Concept

- ✓ Strategic Level: STRATCOM and COCOMs use the C2BMC to:
 - Synchronize Intelligence Preparations of the Battlespace (IPB) (launch points, intent, aimpoints)
 - Develop Friendly Course of Action (COA) guidance to COCOMs
- ✓ Operational Level: COCOM, Joint Forces Commander (JFC), Joint Forces Air Component Commander (JFACC) use C2BMC to:
 - Understand IPB (launch points, intent, aim points)
 - Develop and evaluate Friendly COA options
 - Create Initial Defense Design to serve as tasking when confirmed as feasible by sensor and weapon elements
- Tactical Level: Uses AMDWS and the AEGIS BMD Mission Planner to:
 - Receive IPB (launch points, intent, aim points) as inputs
 - Receive Friendly COA options to evaluate
 - Validate Mission Tasks with refinements (e.g., search sectors to accomplish mission, P_{ES} achievable for tasking)
 - Integrate and optimize Service specific battle command requirements
 - Initialize sensors and weapons

**EVOLVING PLANNING ARCHITECTURE TO REMAIN
CONSISTENT WITH EXISTING JOINT DOCTRINE**

Spiral 6.2 C2BMC Planner User Interface (Notional)

The screenshot displays the C2BMC Planner interface with the following components and annotations:

- Plan Versions:** An annotation pointing to the 'Local Files' section in the Explorer pane, which lists various plan versions (v1, v2, v3, v4, v5).
- Plans on each Server:** An annotation pointing to the 'Plans' section in the Explorer pane, which lists plans stored on different servers (NORTHCOM, PACOM).
- Defense Designs:** An annotation pointing to the 'Defense Design' section in the Explorer pane, which lists specific defense designs (Baseline Defense, Early Hostilities, Second Aegis, Second Thaad, Thaad).
- Contingencies, Follow-on Defense Designs:** An annotation pointing to the 'Contingency Planning' tab in the main window, which displays a timeline of events and contingencies.
- Configured Servers (Collaboration Support):** An annotation pointing to the 'Communication' pane, which shows a table of configured servers and their locations.

The main window displays a timeline of events and contingencies, including 'Lodgement', 'Hostilities', 'Baseline Defense', 'Second Aegis', 'Thaad', 'Early Hostilities', and 'Baseline with FBX-T'. The timeline is divided into phases (C+0, C+1, C+2) and time intervals (+0, +1, +2, +3, +4, +5, +6, +7, +8, +9, +10, +11, +12, +13). The timeline also shows 'Deliberate Plan' and 'Contingency Planning' sections.

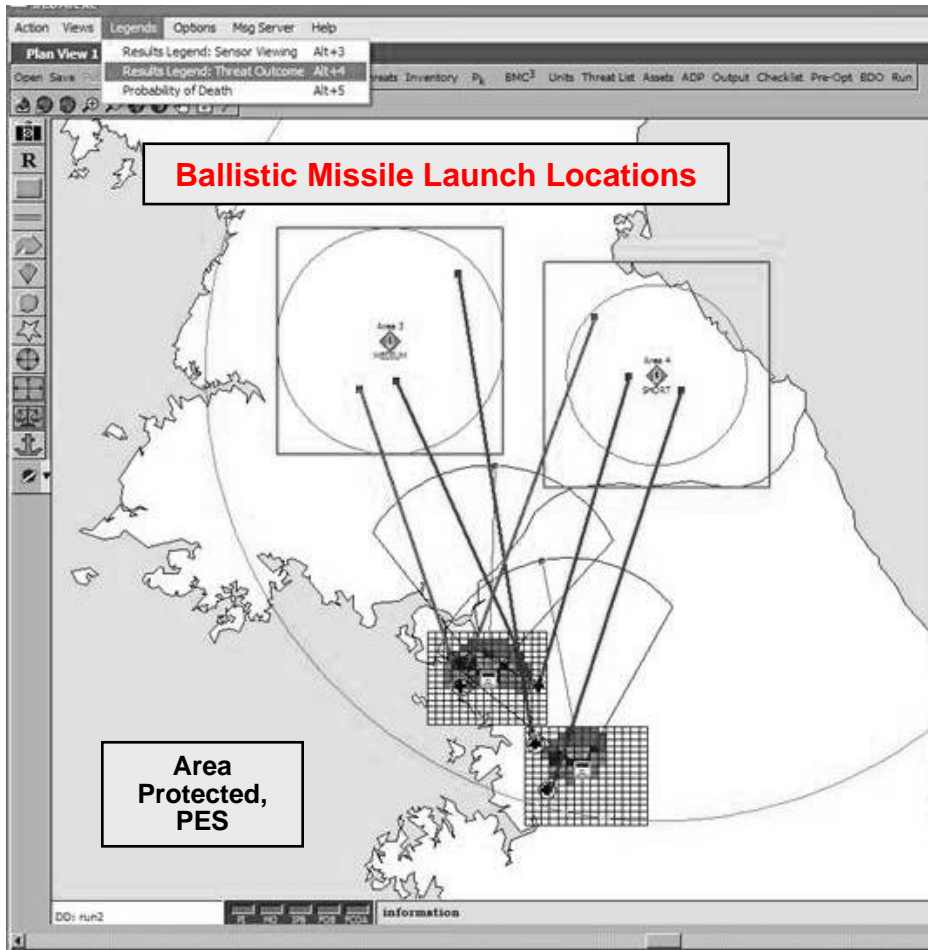

The bottom pane shows a map of Japan with various locations marked, including NukeSilo-01, Medium1, AEGIS1, AEGIS2, SAPPORO, KAWAKISHI, NIIGATA, HIGASHI-IWASE, FUNATSU, KAWAGOE, NAGOYA, OSHIHAMA, MASUDA, OKAYAMA, INDAHAMA, MATSU, KITARYUSHU, FUJIMORI, MATSUBASE, and KAGOSHIMA.

| Ref... | Name | Location |
|--------|-----------------|---|
| No | Local Files | C:\h\data\local\BOPCL1\data\planner\Local f |
| No | NORTHCOM Server | t3://COSWS/CB54/CN.mdnt.com:7031 |
| Yes | PACOM Server | t3://localhost:7031 |

Planner* Analysis Metrics & Results

(Notional)

- **Footprint and Defended Area Calculations**
 - Measures of Effectiveness (MoEs)
 - Probability of Engagement Success (P_{es})
 - Number of Engagement Opportunities
 - Earliest Detection Time
 - Avg Time in Track
 - Avg Time in track post-boost
 - Avg latest lost track time
 - Avg earliest Intercept
 - Most stressing threats identified
 - Support to Offense-Defense Integration
- **Operating Area View**
 - Identifies Optimal Platform Positions
 - Includes All MoEs
 - Provides Architecture Context for Optimal Element Placement
- **Scenario Analysis**
 - Addresses issues with raid size and inventory usage
- **Analysis Results by Different OPSCAP Combinations**

MDA XML – CIXS Convergence Strategy

C2BMC Planner (JDP Upgrade) Status Planning and Initialization

Accomplishments

- **Current Deployment**
 - PACOM, STRATCOM, NORTHCOM C2BMC Suites
 - Laptop planners at EUCOM, CENTCOM, USFJ, USFK
 - Laptop planners at 32nd, 94th, 263rd AAMDC and 357th AMDD
- **Interfaces**
 - AEGIS BMD interface
 - Successful demo – Feb 07
 - Evaluating how best to interface with MOC and to JFMCC to AEGIS BMD
 - Dialog on supplying laptops to MOC now
 - AMDWS/PATRIOT interface
 - Improvements on contract
 - THAAD interface
 - Initial interface content identified
 - Working XML interface (CIXS)
 - NATO
 - Planner in test
 - CIXS 3.0 will be interface (also for IBCS)

Next Steps

- **On track for analysis improvements**
 - Blue Force Validation; Joint Analysis Group; earth rotation; threat coordination
 - Improving user interface and simplifying coding
 - Warfighter/Developer forum – Oct 07
- **Developing way ahead for JIAMD**
 - Army/MDA IAMD MOU (AAMDC)
 - MDA/AMDWS/IDD (IBCS) evaluating how best to supply planner as GFE
 - Implementing into ETOC for 32nd AAMDC
 - Implementing JIAMD for AOC
 - AF on-board – plan is to replace JDP
 - Discussion on-going with Navy N-86 on collaborative interface to new MOCs
- **Move the planner into the NECC environment**

Approved for Public Release
08-MDA-3238 (20 FEB 08)

**C2BMC Planner: Born from JDP (Air Defense)
-- Migrating to Air and Missile Defense**

IBCS – IAMD Battle Command System
AMDWS – Air and Missile Defense Work Station
IAMD – integrated Air and Missile Defense
IDD – Integrated Defense Designer
AOC – Air Operations Center
BSD – Battle Space Designer
NECC – DISA's Net Enabled Command Capability

Summary

MDA/BC looks forward to working with the IBCS contractors and the IAMD PO in this critical effort.
